parentTerm

- a NADH metabolic process
- a antigen processing and presentation of peptide antigen via MHC class I
- a cell cycle G2/M phase transition
- a cell−cell adhesion via plasma−membrane adhesion molecules
- a copulation
- a hormone metabolic process
- a intrinsic apoptotic signaling pathway
- a mitochondrial transport
- a pigmentation
- a positive regulation of cell killing
- a purine−containing compound metabolic process
- a response to oxidative stress
- a rhythmic process
- a ribonucleotide metabolic process
- a ribosomal large subunit biogenesis
- a secondary metabolic process
- a stem cell differentiation
- a viral transcription
